About

My involvement with technology stems from exploring various disciplines.

In 8 years as an entrepreneur, I discovered the challenges of security in organizations and, related to this, I got interested in information flows and privacy.

I've been programming for several years. In 2022 I decided to make my way into cybersecurity specialization.

Experience

2016-2023 — **Lecop Central**

I co-founded a company from scratch, which culminated in its successful sale in 2023.

A B2B service designed to streamline the supply of office supplies through a unified channel and a program aimed at employee well-being and retention goals, eliminating the need to manage multiple suppliers.

Throughout these years, I tested my ability to adapt to uncertain and risky scenarios. I was responsible for the design and implementation of every aspect of the organization, including:

- General management of the company and development of solutions for +300 clients in Argentina.
- Administration and operational direction of a team of +10 people.
- Process automation in the supply chain and creation of a customized management system.

2012-2016 — Otros

Previously, I have explored various paths, including roles in administrative and sales areas, teaching, as well as some microenterprises.

Skills

Languages

- Spanish (Native)
- English (Professional)
- Portuguese (Professional)

Programming

Currently, I am focusing on `C`++, networking, and computer fundamentals. Additionally, I have growing proficiency in Pentesting, Antimalware Analysis, and Threat Intelligence.

I use `Python`, `Bash`, and `Powershell` as daily drivers for multipurpose scripting.

Operating Systems: `Linux`, `Windows`, `macOS`.

I also have general knowledge of `Databases`, `Go`, `Lisp`, `Lua`, `Perl`, `PHP`, `Ruby`, `HTML`, `JavaScript`, and `CSS`.

I learn quickly, so I am open to opportunities regardless of the stack of technologies or frameworks used.

Projects

- Enhancing skill sets in [TryHackMe (view my profile)](#)
- Volunteer in the cybersecurity subcommittee for the [5th People's Health Assembly PHA5](#)
- Collaborated on documentation for the [DVWA repository](#)
- Static websites, web scrapers, CRM, and Management Systems.
- I am passionate about text editors and text operations. My favorite editor is `Vim`, and I'm involved in the community.

Education & Background

My diverse interests have led me through various educational experiences, and despite not having completed any university degree, I owe much to these experiences.

I am self-taught in many subjects, consider myself a good reader, and adept at finding resources. I have also learned from various courses and, most importantly, from conversations with *makers* and experts.

In the context of this presentation, I would like to highlight:

- **2024 (currently)** — Burp Suite Certified Practitioner (BSCP) by [Portswigger](#)
- **2024** — Curso de ciberseguridad para microempresas y autónomos del sector Salud by [INCIBE](#)
- **2023** — Fundamentals of Hacking and Defense by [Ekoparty](#)
- **2023** — ISC2 CC by [ISC2](#)
- **2022** — Ecosistema Crypto & Defi 101 by [Defy Education](#)
- **2016-2019** — Licenciatura en Sociología; UBA (Argentina)
- **2009-2014** — Licenciatura en Música; UNLP (Argentina)
